DETAILED ACTION

1. Claims 10-11, and 13 are allowed, renumbered as 1-3.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:
3. The cited prior art taken alone or in combination fail to teach, in combination with the other claimed limitation, adjusting one or more parameter in the second set of parameters in accordance with a third set of parameters used to regulate a time period associated with processing the work items by the thread in response to a determination that workflow conditions do not have a characteristic indicated by the second set of parameters as recited in independent claim 10 (renumbered claim 1), and indicated, by the parameter, one or more characteristics from the group consisting of: a number of work items in the data structure; a time period since a work item in the data structure has been processed by the plurality of threads; the number of work items and the time period; or the number of work items or the time period as recited in independent claim 13 (renumbered claim 3).
4. The closest prior art, Deng et al. (Scheduling Real-Time Applications in an Open Environment) teaches a method for scheduling real-time and non-real-time applications that require use of resources. Shiu et al. (US 200410031035) teaches processing work items based on characteristics or criteria being met. Cota-Robles (US 200110056456) teaches the restricting of processing in accordance with parameters. Doing et al. (US Pat No. 6,018,759) teaches performance tuning by adjusting threshold parameters.

However, the combination of reference fails to teach adjusting one or more parameter in the second set of parameters in accordance with a third set of parameters used to regulate a time period associated with processing the work items by the thread in response to a determination that workflow conditions do not have a characteristic indicated by the second set of parameters as recited in independent claim 10 (renumbered claim 1), and indicated, by the parameter, one or more characteristics from the group consisting of: a number of work items in the data structure; a time period since a work item in the data structure has been processed by the plurality of threads; the number of work items and the time period; or the number of work items or the time period as recited in independent claim 13 (renumbered claim 3).

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
